

# Caron Sathekge

Johannesburg, Midrand (Willing to Relocate) | 065 875 0803 | caronsathekge28@gmail.com | linkedin.com/in/1mrsathekge | github.com/MrSathekge

## Professional Summary

---

Analytically-trained professional transitioning into software development and applied AI, with 4 years of experience across data analytics, operations, and workflow automation. Recently shipped two production projects using AI-assisted development (Claude Code): a full-stack fraud review platform and an autonomous AI social media agent, alongside hands-on C# experience building an automated trading system. Comfortable across the stack: Python, SQL, JavaScript/TypeScript, Next.js, Supabase/Postgres, C#, and experienced integrating OpenAI and third-party APIs into real automation workflows. Fast learner with a strong mathematical/CS foundation, now focused on growing into a developer/AI engineering role.

## Projects

---

### Fraud Detection & Review Platform (Next.js, Supabase/Postgres, SQL, TypeScript)

- Designed and built a full-stack internal fraud review tool for a fintech operations team, using AI-assisted development (Claude Code) to accelerate delivery.
- Built a scored review queue with configurable, weighted risk indicators, sortable and filterable by score, MSISDN, and assigned agent.
- Wrote SQL scoring functions and Supabase views/migrations to compute fraud indicators and surface them in real time on member-level investigation pages.
- Implemented decision workflows (e.g. Flagged, Needs Watching, Account Suspended) and an audit trail for reviewer actions.

### Automated Trading Decision System (C#, Synthetic Indices Expert Advisor)

- Built and edited a C# Expert Advisor that generates real-time trading signals and manages risk-based position sizing using statistical and technical indicators.
- Applied the same real-time automated decisioning and risk-threshold logic that underpins fraud scoring systems.

### AI Social Media Automation Agent (n8n, OpenAI API, Meta Graph API)

- Designed and operate an end-to-end n8n automation pipeline that generates, quality-scores, and schedules social media content.
- Integrated the OpenAI API for content/image generation and the Facebook/Instagram Graph API for automated publishing, removing manual posting effort.
- Built in quality-control and review steps to catch generation issues (e.g. image text errors) before content goes live.

## Experience

---

### Junior Operations Manager | SavvySaver | Johannesburg | June 2025 - Present

- Acting as technical lead for a small startup: building and shipping internal tools (the fraud review platform above), automation pipelines, and AI-powered features alongside day-to-day operations.
- Built an AI-powered customer support chatbot resolving over 60% of user queries within minutes.
- Designed and implemented workflow automation and data integration using n8n, OpenAI, Firebase, APIs, and Excel.
- Delivered daily KPI reporting by extracting, consolidating, transforming, and validating data from multiple operational systems (SQL, Power BI, Excel).
- Worked across Docker, Ubuntu Linux, Bash, Postman, and Git in day-to-day technical workflows.

### Systems Reporting and Support Analyst | CSG International | Johannesburg | May 2023 - June 2025

- Migrated Excel-based reporting into Power BI dashboards for a 6,000-employee IT organisation.
- Reduced missing/unapproved timecard hours from 13,000 to ~2,000 within 2 months through process and reporting improvements.
- Used Jira and Azure DevOps to support Agile workflow management, issue tracking, and cross-team collaboration.

### Data Science Intern | Explore AI Academy | Johannesburg | July 2022 - February 2023

- Built and deployed machine learning models (regression, classification) using Python, deployed via Streamlit on AWS EC2.
- Developed Power BI dashboards and SQL reporting solutions, and presented analytical findings to stakeholders.
- Independently built and published machine learning projects on GitHub ([github.com/MrSathekge](https://github.com/MrSathekge)), including a credit card fraud detection model and credit risk/default modelling, early groundwork for the fraud review platform above.

## Education

---

Bachelor of Science in Mathematics and Computer Science, University of Limpopo (2022), distinctions in Artificial Intelligence and Operating Systems

Higher Certificate in Data Science, Explore AI Academy (2023)

## Certifications

---

Microsoft Power BI Data Analyst Associate (PL-300) - Microsoft Power Platform Fundamentals (PL-900) - AWS Certified Cloud Practitioner (CCP) - Microsoft Azure Fundamentals

## Technical Skills

---

Python - SQL - JavaScript/TypeScript - C# - Next.js - React - Supabase/Postgres - n8n - OpenAI API Integration - REST APIs - Docker - Ubuntu Linux - Bash - Git - AI-Assisted Development (Claude Code) - AI Agents - Power BI - Excel - Machine Learning - AWS EC2 - Jira - Azure DevOps - Postman
